Introduction

A small business initially can manufacture their own product items by their self. However, as the business grows it may become difficult to meet the higher demand of the market. In this scenario, the owner needs to contract with someone in order to increase the manufacturing capacity and if the demand for the product becomes too high the owner may have to license the design.

This process involves legal arrangements and well drafted agreements. The present event will help the audience to understand the subtle difference in different agreements that are involved in the process and what precautions need to taken to safeguard intellectual property while drafting such agreements.
